

Princess Animal Hospital

Every Pet. Every Client. Every Family. Every Time.

How we say “**WE CARE**”, while caring for your pet during surgery.

- ♥ Your pet will receive pain medication before, during and after their procedure, included with the cost of surgery.
- ♥ Your pet will receive intravenous fluids to make the anesthetic more safe.
- ♥ While your vet is performing the surgery, your pet will be monitored by a veterinary technologist, trained specifically for this purpose.
- ♥ Specialized equipment will be used to maintain your pet’s body temperature during surgery.
- ♥ We use radio-surgery (using sound waves) to minimize the amount of inflammation associated with your pet’s incision.
- ♥ Your pet will receive two laser treatments after their surgery, included in the cost of surgery.
- ♥ If your pet does not already have a microchip, we will do this at the time of surgery, without additional cost.
- ♥ Dogs being spayed have the opportunity to have the surgery done laparoscopically through an 11mm incision, to reduce pain by 2/3!
- ♥ You have the opportunity to include the cost of the surgery in your pet’s Best Care Plan, allowing you to pay for the care over 6 to 10 months, as you wish.
